

MICHIGAN

HEATING & COOLING

Simplifying the HVAC Industry

At Michigan Heating and Cooling, our concern is to keep you informed of the most advanced and up-to-date heating, air conditioning, and ventilation equipment. Whether it is proactive upgrades to your existing equipment or replacement, our team will educate you on all of the current options and possibilities. Michigan Heating can offer equipment from all major heating, ventilation, and air conditioning manufacturers.

Qualified in the following areas:

- Design / Build
- HVAC Facilities Maintenance
- HVAC Service
- Field Estimation
- New Project Installation

Our staff is trained and knowledgeable to provide you with the most appropriate products for your design. All aspects of a building should be taken into account when speaking about your heating, ventilation, and air conditioning system. Our team will interview you to bring forward all relevant information such as use of the space, length of lease, future plans of the building, environmental impact, etc. All of these factors will affect the type and style of equip-

ment that is chosen to be installed. Our project managers and installation crews will ensure that your project is installed as per the criteria set forth in your design specifications. We work with architects, engineers, contractors and many commercial clients. We will do everything in our power to give you the high quality service you deserve.
